

Statement of Work — IndependencePhone.com Redesign

Project Code: IP-WEB-2026-Q2 **Client:** Premier Companies (Franklin, TN) **Client Contact:** Jordan Grindell — jordan@premiercompanies.com · 615.591.3400 x234 **Builder:** Andrew Ansley **Date:** 2026-06-15 **Status:** Draft v3 — pending Andrew's review before sending to Jordan

1. Executive Summary

Redesign and rebuild of **independencephone.com** as a single-domain **Shopify** site — direct to Shopify, no WordPress interim. The new site is a Conversion Rate Optimization (CRO)-optimized engine for the Independence Phone line (Freedom \$100 + Patriot \$150, \$17.76/month service) with a 250th-Anniversary brand narrative, a Search Engine Optimization (SEO) foundation for organic discovery, an AI Optimization (AIO) foundation for visibility in ChatGPT / Claude / Perplexity / Google AI Overviews, and page-speed + image optimization targeting sub-3-second Largest Contentful Paint (LCP) on 4G mobile.

Three pages, all custom-designed:

1. **Home** — the main conversion page
2. **Category** — the collection page that holds Freedom and Patriot
3. **Product** — the product page template that serves both Stock Keeping Units (SKUs)

Built so Jordan can run it without a developer — page copy, product photos, FAQs, and prices are all editable through Shopify's admin. Includes a written guide and recorded walkthrough video.

Fixed price: \$11,000 USD · family & friends rate: \$5,500 (50% off) for the same scope. Delivery: 2 weeks from kickoff, gated on Jordan's inputs in §8.

2. Scope of Work

2.1 In Scope

Pages (all custom-designed, all editable through Shopify's admin):

- **Home** — the conversion page (CRO-optimized, full IA per §3.1)
- **Category** — the collection page for the Independence Phone line (collection banner, product grid, sort/filter, breadcrumb, cross-sell)
- **Product** — the product page template that serves both the Freedom and Patriot SKUs (lifestyle hero, features, specs, FAQ, cross-sell)

- **Lead-gen form page** — Option B (form posts to the distributor Application Programming Interface (API); success → confirmation page; failure → retry visible)

Pages (Shopify standard boilerplate — no custom design work):

- About, Contact, Privacy Policy, Terms of Service, 404

Design + Copy:

- 1 hero image — **AI-generated, included** (rights cleared for the Independence Phone brand)
- Product image set for Freedom and Patriot — AI-generated where current photography is unavailable
- All on-page copy: hero, sections, Frequently Asked Questions (FAQ), product descriptions

Non-developer editability (this is a deliverable, not an afterthought):

- Page copy editable through Shopify's online store editor (no code required)
- Product photos, prices, descriptions swappable in the Shopify admin
- FAQ items editable in a single block (no developer needed to add a question)
- Form fields configurable from the Shopify admin
- Written guide (PDF) covering copy, photo, and FAQ edits
- Recorded walkthrough video (~10 minutes) covering the same
- 30 days of bug-fix support after launch (anything in scope that breaks; not new work)

Optimizations included in the base — three categories:

A. Speed & image optimization - Image conversion to WebP with fallbacks - Lazy loading on below-the-fold images - Responsive image sizing (`srcset`) at 320 / 768 / 1280 / 1920 px breakpoints - Code splitting (defer non-critical JavaScript) - Critical CSS inlined - Target Largest Contentful Paint (LCP) < 3s on 4G mobile - Target Cumulative Layout Shift (CLS) < 0.1 - Target First Contentful Paint (FCP) < 1.8s - Lighthouse mobile scores: Performance > 85, Accessibility > 90, Best Practices > 90, Search Engine Optimization > 90

B. Search Engine Optimization (SEO) + AI Optimization (AIO) foundation - Keyword research — 8–12 primary + long-tail terms in the kid-safe phone / parental control category - On-page SEO: title tags, meta descriptions, H1–H6 hierarchy, alt text, internal linking - Schema.org structured data: `Product` (with `Offer`), `Organization`, `FAQPage`, `BreadcrumbList` - `sitemap.xml` + `robots.txt` - Google Business Profile alignment (Premier Companies, Franklin TN) - **AI Optimization (AIO):** - `llms.txt` (Large Language Model (LLM) crawl allowance manifest, modeled on the emerging spec) - `Organization` + `Product` schema with sameAs links to social profiles and Wikipedia/Wikidata entries where they exist - Source-citable FAQ block (LLMs extract answer-style content) - Natural-language "About" copy with clear entity identity (LLMs cite sources with named entities) - **Answer Engine Optimization (AEO):** short, citable answer blocks for the top 5 parent questions - Robots directives for major AI bots (GPTBot, ClaudeBot, PerplexityBot, Google-Extended) — default allow with rate-limit hints - Knowledge-graph alignment checklist (manual: claim/create Wikidata, trigger Google Knowledge Panel)

C. Conversion Rate Optimization (CRO) — applied to all three pages - Hero with a single primary Call to Action (CTA) above the fold - Social-proof / trust-signal section (American-made, 42-year-old company, 250th Anniversary) - Comparison table vs Tin Can, Gabb, Pinwheel, Troomi, Bark - FAQ objection-handling (10–12 questions on Home; per-

SKU on Product) - Risk reversal: warranty + 30-day return policy surfaced - Mobile-first responsive design (320 / 768 / 1280 px breakpoints) - Multi-step form (fewer fields above the fold, optional details below) - Multiple CTAs throughout each page - Speed budget enforced: < 3s mobile LCP on 4G (overlaps with §A)

Front-end / Backend handoff:

- Andrew defines the data shapes the page reads (product data, pricing, stock state)
- Andrew defines the data shape the form writes (order inquiry payload as a JavaScript Object Notation (JSON) example)
- Andrew delivers a 1-page handoff document to Jordan's API developer with both shapes in JSON
- Front-end code is built to consume the agreed shapes — wire-up of the actual API endpoints is **not** in scope (see §2.2). When the API is ready, swapping mock data → live data is a small, scoped iteration (estimated 2–4 hours at the iteration rate).

2.2 NOT In Scope (call-out so there's no surprise)

- Backend wiring, auth, retries, error handling on the distributor API
- Payment gateway integration
- Email marketing / drip campaigns / abandoned-cart flows
- Blog or content publishing system
- Ongoing SEO management, link building, content calendar
- Shopify app subscriptions (any premium Shopify apps the site needs)
- Hero photoshoot or product photoshoot (AI image is included; professional photography is a separate engagement)
- Logo / brand-system redesign (existing IndependencePhone logo is used as-is)
- Translations / multilingual site
- Email notification setup (the lead-gen form posts to the distributor API; downstream email routing is on Jordan's side)

3. Information Architecture

3.1 Home — section order

1. **Hero** — AI-generated image of kid + parents + American flag; headline; subhead; primary CTA "Order Now" or "Talk to Us"
2. **The Problem** — parental concerns (screen addiction, predators, social media)
3. **The Solution** — Independence Phone: Wi-Fi-only, no social media, no browser, no app store
4. **Product Showcase** — Freedom \$100, Patriot \$150, feature icons
5. **How It Works** — setup, monthly service, parent dashboard
6. **Trust Signals** — American-made, 42-year-old company, multi-generational family-owned, 250th Anniversary
7. **Comparison vs Competition** — Tin Can, Gabb, Pinwheel, Troomi, Bark

8. **Pricing** — Freedom \$100 + \$17.76/month, Patriot \$150 + \$17.76/month, no-contract messaging
9. **Frequently Asked Questions (FAQ)** — 10–12 objection-handling questions
10. **Final Call to Action (CTA) + Lead-Gen Form** — Option B (form posts to distributor API; success → confirmation page; failure → retry visible)
11. **Footer** — legal, contact, social

3.2 Category — section order

1. **Collection banner** — branded header, brief positioning line
2. **Product grid** — cards for Freedom + Patriot with image, name, price, monthly cost, primary CTA
3. **Sort / filter** — by price, by feature
4. **Breadcrumb** — Home › Phones
5. **Cross-sell / related categories** — accessories or future product lines
6. **Footer** — shared with Home

3.3 Product — section order (used for both SKUs)

1. **Lifestyle hero image** — Freedom or Patriot in use
2. **Price + monthly cost** — large, prominent
3. **Primary Call to Action (CTA)** — "Talk to Us" (lead-gen default; switchable to Add to Cart in admin)
4. **Feature list with icons** — Wi-Fi-only, no browser, no app store, parent dashboard, etc.
5. **Specs** — full spec table
6. **What's in the box**
7. **Frequently Asked Questions (FAQ)** — per-SKU objection handling
8. **Cross-sell** — link to the other SKU (Freedom ↔ Patriot)
9. **Trust badges** — warranty, return policy, American-made
10. **Footer** — shared with Home

4. 2-Week Timeline

Assumes a Monday kickoff. **All days are gated on the §8 dependencies** — if Jordan's inputs slip, the timeline slips 1-for-1.

Week 1

Day	Andrew	Jordan
Mon (Day 1)	Kickoff call. Lock slogan choice (1–2 of the 19 in the brief). Start SEO keyword research. Start AIO audit of competitors.	Available for kickoff. Sends existing brand assets (logo, current copy, current photos if any).

Day	Andrew	Jordan
Tue (Day 2)	Information Architecture (IA) + wireframes for Home, Category, and Product. SEO keyword research finalized. AIO audit report (1 page).	Approves wireframes.
Wed (Day 3)	Design system (colors, type, components). Generate AI hero image. Generate AI product images for Freedom + Patriot.	Approves AI images (any edits bill at \$60/hour per \$6).
Thu (Day 4)	Build Home sections 1–6 (hero through trust signals). Start Category page (collection banner + product grid).	—
Fri (Day 5)	Build Home sections 7–11 (comparison, pricing, FAQ, CTA, form). Complete Category page. Start Product page (lifestyle hero + features + specs).	Reviews Home + Category draft end-of-day.

Week 2

Day	Andrew	Jordan
Mon (Day 6)	Complete Product page (FAQ, cross-sell, trust badges). Implement schema.org markup across all 3 pages. Create <code>llms.txt</code> , <code>sitemap.xml</code> , <code>robots.txt</code> . Meta tags + alt text. Speed & image optimization pass.	—
Tue (Day 7)	Internal Quality Assurance (QA). Lighthouse + axe-core passes. Rev. 1 to Jordan.	Consolidates Rev. 1 feedback.
Wed (Day 8)	Implement Rev. 1 feedback. (Up to 2 hours of iteration time included in the base; additional time at \$100/hour per \$6.)	Available for clarification calls.
Thu (Day 9)	Final SEO + AIO pass. Cross-browser QA (Chrome, Safari, Firefox, Edge, iOS Safari, Android Chrome). Accessibility (WCAG 2.1 AA) pass. Final speed budget check.	—
Fri (Day 10)	Deliver handoff document (1-pager for API developer). Recorded walkthrough video. Written edit guide (PDF). Site goes live. 30 days of bug-fix support begins.	Approves for launch.

30 days of bug-fix support is included in the base price (anything in scope that breaks; not new work). After 30 days, ongoing support is at the iteration rate (\$6).

5. Pricing & Payment

5.1 Base Price

\$11,000 United States Dollars (USD) for the full scope in §2.1.

5.2 Family & Friends Rate

Premier Companies qualifies for our **family & friends rate: \$5,500 (50% off)** — same scope, same timeline, same deliverables. No code, no minimum, no fine print. The rate is applied at invoice.

The family & friends rate is non-stackable with other discounts.

5.3 Payment Terms

- **50% deposit (\$5,500)** due upon signing to reserve the kickoff date
- **50% balance (\$5,500)** due on launch day (Day 10)

For family & friends pricing: **\$2,750 deposit / \$2,750 on launch.**

Net-15 invoice terms. A 1.5%/month late fee applies past 30 days.

5.4 What Happens if Scope Changes

- **New features** beyond §2.1: scoped as a change order with a fixed-price estimate before work begins.
- **Iteration hours** within scope: 2 hours included; overage at the iteration rate (\$6).
- **Backend wire-up** (when the API is ready): quoted separately based on the actual integration spec — estimated 2–4 hours at the iteration rate once Jordan's API developer provides a stable endpoint and test data.

6. Out-of-Scope Rate Card

Work	Rate
Iterations (revisions, tweaks, additional sections within scope)	\$100/hour
Photo / video edits (edits to AI-generated images, video trim, color correction)	\$60/hour
New features (anything not in §2.1)	Fixed-price quote per change order
Backend integration (when API is ready)	\$100/hour, estimated 2–4 hrs
Rush delivery (< 2 weeks)	+25% surcharge, subject to availability

Time is tracked in 0.25-hour increments and reported with each invoice. Approvals requested before time exceeds 2 hours in any given week.

7. Revision & Approval Process

- **Round 1** (Day 7): full site draft. Jordan has 1 business day to consolidate feedback.
- **Round 2** (Day 8): revisions applied. Up to 2 hours of iteration time included.
- **Round 3+** (if needed): additional rounds at the iteration rate (\$100/hour) — Andrew will flag the time before continuing.

- **Launch approval** is the explicit go-ahead from Jordan on Day 10. Silence past Day 10 EOB = approval.

8. Assumptions & Dependencies

The 2-week timeline assumes:

1. **Slogans chosen** by Jordan by end of Day 1 (1–2 from the 19 in the original brief). If not, Andrew picks based on the SEO keyword research.
 2. **Brand assets** (logo, current copy, any existing product photos) provided by Jordan by Day 1 EOB.
 3. **AI images are accepted** as the hero + product imagery. If Jordan requires a professional photoshoot, that's a separate engagement and adds 1–2 weeks.
 4. **API documentation** for product data and order submission is shared by Day 5. If unavailable, Andrew builds the front-end with a documented mock data shape that Jordan's API developer fills in later (see §2.2).
 5. **Rev. 1 feedback** consolidated by Jordan by Tuesday EOB of Week 2.
 6. **Form submission behavior** defaults to lead-gen form (Option B). If Jordan wants Shopify checkout instead, that's a scope change and quoted per §5.4.
 7. **Shopify store** is provisioned and accessible to Andrew by Day 1 (theme install + collaborator access).
-

9. Approval / Sign-Off

By signing below, both parties agree to the scope, timeline, and pricing in this document.

11. Glossary (acronyms spelled out on first use, abbreviated thereafter)

- **SOW** — Statement of Work (this document)
- **CRO** — Conversion Rate Optimization
- **SEO** — Search Engine Optimization
- **AIO** — AI Optimization (visibility in ChatGPT / Claude / Perplexity / Google AI Overviews)
- **AEO** — Answer Engine Optimization (a sub-discipline of AIO; short citable answer blocks)
- **LLM** — Large Language Model
- **FAQ** — Frequently Asked Questions
- **CTA** — Call to Action
- **API** — Application Programming Interface
- **JSON** — JavaScript Object Notation
- **SKUs** — Stock Keeping Units
- **IA** — Information Architecture
- **QA** — Quality Assurance
- **LCP** — Largest Contentful Paint (a Core Web Vital)
- **CLS** — Cumulative Layout Shift (a Core Web Vital)
- **FCP** — First Contentful Paint
- **WCAG** — Web Content Accessibility Guidelines
- **A11y** — Accessibility (a11y = "a" + 11 letters + "y")
- **BP** — Best Practices
- **HTML** — HyperText Markup Language
- **CSS** — Cascading Style Sheets
- **URL** — Uniform Resource Locator
- **USD** — United States Dollars
- **EOB** — End Of Business day

*This Statement of Work supersedes any prior verbal or written estimates. Effective for 30 days from the date above.
Pricing valid through 2026-07-15.*
